

Project Overview & Context

1. Project Overview & Context

- **Client:** Vite & Gourmand (Bordeaux-based caterer).
- **Goal:** A web application to showcase menus and handle customer orders.
- **Target Users:** Visitors (unauthenticated), Customers (authenticated), Employees, and Administrators.

2. Functional Requirements

Front-End (Angular)

- **Home Page:** Presentation, team professionalism, and validated client reviews.
- **Menu Catalog:** Global view of all menus with dynamic filtering (price, theme, diet, etc.).
- **Detailed View:** Full menu details, allergens, storage conditions, and a "Order" button.
- **Authentication:** Sign-up (with automated welcome mail), login (email as username), and password recovery.
- **Ordering System:** Pre-filled forms, dynamic price calculation (including delivery fees outside Bordeaux and 10% discounts for large groups), and email confirmation.
- **User Spaces:**
 - **Customer:** Order history, modification/cancellation (before acceptance), and review submission.
 - **Employee:** Management of menus, schedules, and order statuses (from "accepted" to "finished").

- **Admin:** Employee account management and a **Dashboard with charts** comparing menu orders.

Back-End (Python)

- **Relational DB (SQL):** Store users, menus, orders, and reviews.
- **Non-Relational DB (NoSQL):** Required specifically for the Admin dashboard data/charts.
- **Business Logic:** Handling status transitions, automated email triggers, and complex price calculations.

3. Technical & Quality Standards

- **Accessibility:** Must comply with **RGAA** standards.
- **Security:** Focus on secure passwords (10+ chars, special char, etc.) and GDPR compliance.
- **Clean Code:** Senior-level best practices, modularity, and thorough commenting.

4. Mandatory Deliverables

Software & Code

- **GitHub Repository:** Public, following Git flow (main, develop, feature branches).
- **Database:** SQL files for schema creation and data integration (fixtures).
- **Deployment:** Live link to the hosted application.

Documentation

- **README.md:** Local deployment instructions.
- **User Manual:** PDF with test credentials for all roles.

- **Technical Doc:** Environment config, CDM/Class diagrams, Use Case and Sequence diagrams.
- **Design Doc:** Style guide (colors/fonts) and 6 Wireframes/Mockups (3 Desktop, 3 Mobile).
- **Project Mgmt:** Link to Jira/Trello and explanation of the management process.
